PHẠM GIA HUY

COMPUTER SCIENCE GRADUATE

Computer Science graduate with project experience in web development, machine learning, and technical research. Skilled in debugging, application integration, and model validation. Seeking an entry-level software engineering, web development, or AI/ML role.

EDUCATION

The University of Texas at San Antonio

B.S. in Computer Science
Graduated May 2026

GPA: 3.50 / 4.00
Major GPA: 3.66 / 4.00

Relevant coursework
Data Structures & Algorithms
Object-Oriented Programming
Artificial Intelligence
Software Engineering
Web Development

TECHNICAL SKILLS

Programming
Java, Python, SQL, C, Bash

Web development
HTML, CSS, JavaScript, EJS, Node.js, Bootstrap

Database
MySQL

Tools
Git, GitHub, VS Code, IntelliJ IDEA

AI-assisted development
ChatGPT for task analysis, debugging, and technical research; independently review and validate outputs.

LANGUAGES

Vietnamese: Native
English: Professional working proficiency

ACADEMIC PROJECTS AND RESEARCH

Personal Website

HTML, CSS, JavaScript, Bootstrap

- Built a responsive, multi-page personal website with interactive front-end components.
- Implemented navigation, forms, event listeners, and responsive UI elements; used Git and GitHub for version control and deployed through GitHub Pages.

NiceFit | Clothing Shop Management Website

Node.js, EJS, MySQL, JavaScript

- Modified and debugged application logic to align with EJS views and project requirements.
- Integrated team-provided product data and images; resolved data-mapping and rendering issues to maintain consistent functionality across pages.

Email Classification | Team Project

Python, Binary Classification

- Trained and tested machine learning models using team-defined approaches and project requirements.
- Debugged training code and validated model behavior by reviewing training loss, input data, and prediction results.

Federated Learning for Healthcare

Undergraduate Research | FedAvg, FedProxy, Secure Aggregation

- Compared privacy-preserving learning approaches across non-IID data, privacy leakage, predictive performance, and communication efficiency.
- Evaluated AUC-ROC, AUPRC, F1-score, calibration error, convergence rounds, client variance, and communication cost to assess privacy, scalability, stability, and efficiency tradeoffs.
