

## PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience applying software development, web technologies, machine learning, and technical research to academic and team-based projects. Skilled in debugging, integrating application components, validating model behavior, and using technical tools to solve project-specific problems. Seeking entry-level software engineering, web development, or AI/ML roles.

## EDUCATION

**The University of Texas at San Antonio (UTSA)** — San Antonio, TX

Bachelor of Science in Computer Science | **Graduated May 2026**

**GPA: 3.50/4.00 | Major GPA: 3.66/4.00**

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Artificial Intelligence, Software Engineering, Web Development

## TECHNICAL SKILLS

**Programming:** Java, Python, SQL, C, Bash

**Web:** HTML, CSS, JavaScript, EJS, Node.js, Bootstrap

**Database:** MySQL

**Development Tools:** Apply Git, GitHub, Visual Studio Code, IntelliJ IDEA, and ChatGPT based on project requirements and development goals. Evaluate project structure, programming language, debugging needs, and collaboration requirements to select appropriate tools for coding, version control, testing, troubleshooting, and documentation.

**AI-Assisted Development:** Use ChatGPT as a personalized AI assistant for task analysis, troubleshooting, code execution, debugging, and technical problem-solving. Structure complex tasks into manageable stages and manage context/token usage to maintain consistent and efficient workflows during longer development sessions. Built project-specific AI-assisted workflows by combining course requirements, external technical documentation, academic references, and project files as contextual inputs, using AI to support analysis, debugging, research, and idea exploration while independently reviewing and validating final outputs.

## ACADEMIC PROJECTS

**Personal Website | HTML, CSS, JavaScript, Bootstrap | GitHub | Live Demo**

- Designed and developed a multi-page personal website with responsive layouts and interactive front-end components.
- Implemented navigation, forms, event listeners, and responsive UI elements using JavaScript and Bootstrap.
- Used Git and GitHub for version control and deployed the static website through GitHub Pages.

**NiceFit – Clothing Shop Management Website | Node.js, EJS, MySQL, JavaScript**

- Modified and debugged application code to ensure application logic correctly aligned with EJS views and project requirements.

- Integrated and validated team-provided product data and images, ensuring accurate rendering across website pages.
- Resolved data-mapping and page-rendering issues while collaborating with team members to maintain consistent application functionality.

### **Email Classification – AI / Machine Learning Team Project | Python, Binary Classification**

- Trained and tested machine learning models based on team-defined classification approaches and project requirements.
- Debugged and adjusted training code to ensure models executed correctly and produced consistent classification outputs.
- Validated model behavior by monitoring training loss, input data, prediction results, and overall execution.

### **Undergraduate Research – Federated Learning for Healthcare | FedAvg, FedProxy, Secure Aggregation**

- Investigated privacy-preserving machine learning for healthcare, comparing FedAvg, FedProxy, and Secure Aggregation across non-IID data, privacy leakage, predictive performance, and communication efficiency.
- Evaluated approaches using AUC-ROC, AUPRC, F1-score, calibration error, convergence rounds, client variance, and communication cost, identifying tradeoffs among privacy, scalability, model stability, and system efficiency.

---

## **LANGUAGES**

**Vietnamese:** Native

**English:** Professional Working Proficiency
